INFORMATION ABOUT THE COURSE

Prerequisites: Students are expected to have a basic understanding of microbiology and chemistry.

Microbial Processes (Weeks 1-4): The objective of this unit is to familiarise the student with the fundamentals of applied and environmental microbiology: structure and metabolism of cells and micro-organisms, metabolic diversity, monitoring methods for pathogens and indicator organisms, impact of water and wastewater treatment on disease transmission.

Chemical Processes (Weeks 5, 7-10): Introduction to principles of the chemistry of natural waters and polluted systems covering basic processes of acidity and alkalinity, mineral precipitation, complexation, oxidation/reduction and surface and colloid chemistry. Tools developed enabling solution of realistic water chemistry problems including introduction to use of chemical speciation computer codes.

ASSESSMENT OVERVIEW

The assessment of this course will be the 3 assignments, 4 quizzes on Microbial Processes and an online exam on Chemical Processes. Students who perform poorly in the assignments and quizzes are recommended to discuss progress with the lecturer during the session. No student may pass a course until all assignments have been completed and returned to the School. An assignment will be considered completed if it is awarded a mark of 30% or more, i.e. significant effort must be demonstrated. The formal online exam scripts will not be returned to students. The Course Coordinator reserves the right to adjust the final scores by scaling if agreed by the Head of School.
